## NEW FOR 2008:

### *Origo Fishing and Hunting Pro / guide pro series watches*

A true partner in your outdoor adventures, Origo's new Guide Pro Series Fishing Pro (pictured) and Hunting Pro track real-time atmospheric and moon phase data, analyze it, and alert the wearer to the best times for fishing or hunting.

Multi-sensor capability includes an easy-to-read weather forecasting feature with temperature function; barometric trends for the past 30 hours; altimeter resolution to 12 inches; altitude graph covering the past 8 hours; one touch direct access digital compass with bearing lock and an adjustable declination; and multiple chronograph functions as well as basic and vibration alarm and clock functions. Innovative features also include moon phases, tide chart, calendar functions with sunrise/sunset, and input storage for ballistic information.

A scratch-resistant crystal glass face and broad LCD display provides superior readability. Water resistant to 165 feet. MSRP \$230.

Other Guide Pro Series watches include the Fishing Guide and Hunting Guide models, with all the same features as the Fishing Pro and Hunting Pro, minus the altimeter, barometric pressure, and weather forecasting in a lighter weight injection molded body. MSRP \$120.

For sportsmen strictly interested in fishing, hunting and time of day information, the Origo Fisher and Hunter watches offer all the same fish and game-specific features as the Fishing and Hunting Guide models without the digital compass. MSRP \$60.
